

Army Corps of Engineers

Formerly Used Defense Sites (FUDS) Location

- ARA- Prime Contractor for USACE
- Groundwater Sampling
- Investigation for Vapor Intrusion (GC/MS)
- Lab Analysis, Customized EDDs
- FUDSChem proficient

ARA is the Prime Contractor in support of two groundwater sampling programs with the U.S. Army Corps of Engineers, (USACE). ARA provides annual and semi-annual groundwater sampling of bed-rock monitoring wells, surface water, and residential wells.

Additionally, ARA has installed a new monitoring well and executed the abandonment of over-burden wells. We are also providing investigation services for vapor intrusion, both sub slab and indoor air quality, including the use of HAPSITE™ portable gas

Chromatography / mass spectrometry (GC/MS). ARA's laboratory provides analysis and customized EDDs. ARA has utilized the USACE database FUDSchem for data loading and validation software. Following each sampling event, ARA provides reporting to USACE, Maine Department of Environmental Protection, area stakeholders and property owners.
